

MAMLAKA YA KUDHIBITI NA KUPAMBANA NA DAWA ZA KULEVYA (DCEA)

**MADA: MAABARA BUBU (CLANDESTINE
LABORATORY – CLAN LAB.) NA DAWA MPYA ZA
KULEVYA (NPS) ILIYOWASILISHWA KWA
WAANDISHI/WAHARIRI WA HABARI
JULY, 2026 DAR ES SALAAM**

MAABARA BUBU(CLANDESTINE LABORATORY)

- Ni maabara ya siri, kificho na ni haramu ambayo hutumika kuchakata au kutengeneza dawa za kulevya bila Mamlaka za Serikali kufahamu.
- Maabara hizi zaweza kuzalisha dawa za kulevya aina ya mbalimbali ikiwemo:
- Methamphetamine, MDMA, amphetamine, dawa jamii ya afyuni(opioids- fentanyl), jamii ya bangi na jamii ya mirugi Pamoja na dawa nyingine haramu kwa kutumia kemikali bashirifu.

MAABARA BUBU(CLANDESTINE LABORATORY

Maabara bubu(clandestine au Clan laboratory) zinaweza kupatikana maeneo ya;

- Nyumba za kuishi (houses / apartments)
- Maghala (Warehouse/godown)
- Karakana
- maeneo ya mbali yaliyojitenga (vijijini /nje ya mji)
- kwenye vyombo vya usafiri au makontena

MAABARA BUBU(CLANDESTINE LABORATORY)

- Haya ni maeneo hatari ya kimazingira kwa kuwa yanakuwa na kemikali na sumu hatari
- Huweza kupelekea hatari ya moto na milipuko
- Husababisha hatari ya kiafya kwa maeneo Jirani na hata wanaofanya kazi katika maabara hizo
- Hatari ya kuongezeka kwa matukio ya uhalifu katika maeneo hayo

Uchepushwaji wa Kemikali bashirifu kutengeneza dawa za kulevya za Methamphetamine katika eneo la Mpaka wa Namanga Upande wa Kenya

- Methylamine 40%
- Phenylacetone,
- Acetone,
- Toluene,
- Ethanol 99%,
- Tartaric Acid
- Sodium Hydroxide

The disruption of a Mexican methamphetamine laboratory in southern Kenya highlights the shifting nature of drug trafficking in Africa, which has long been known as a transit point for drugs moving around the globe. DAILY NATION

The lab, located in Namanga near the Kenya-Tanzania border, was dismantled in September 2024 following a coordinated multi-agency raid.

Uchepushwaji wa Kemikali bashirifu kutengeneza dawa za kulevya za aina mbalimbali katika Maabara bubu Nchini Afrika Kusini

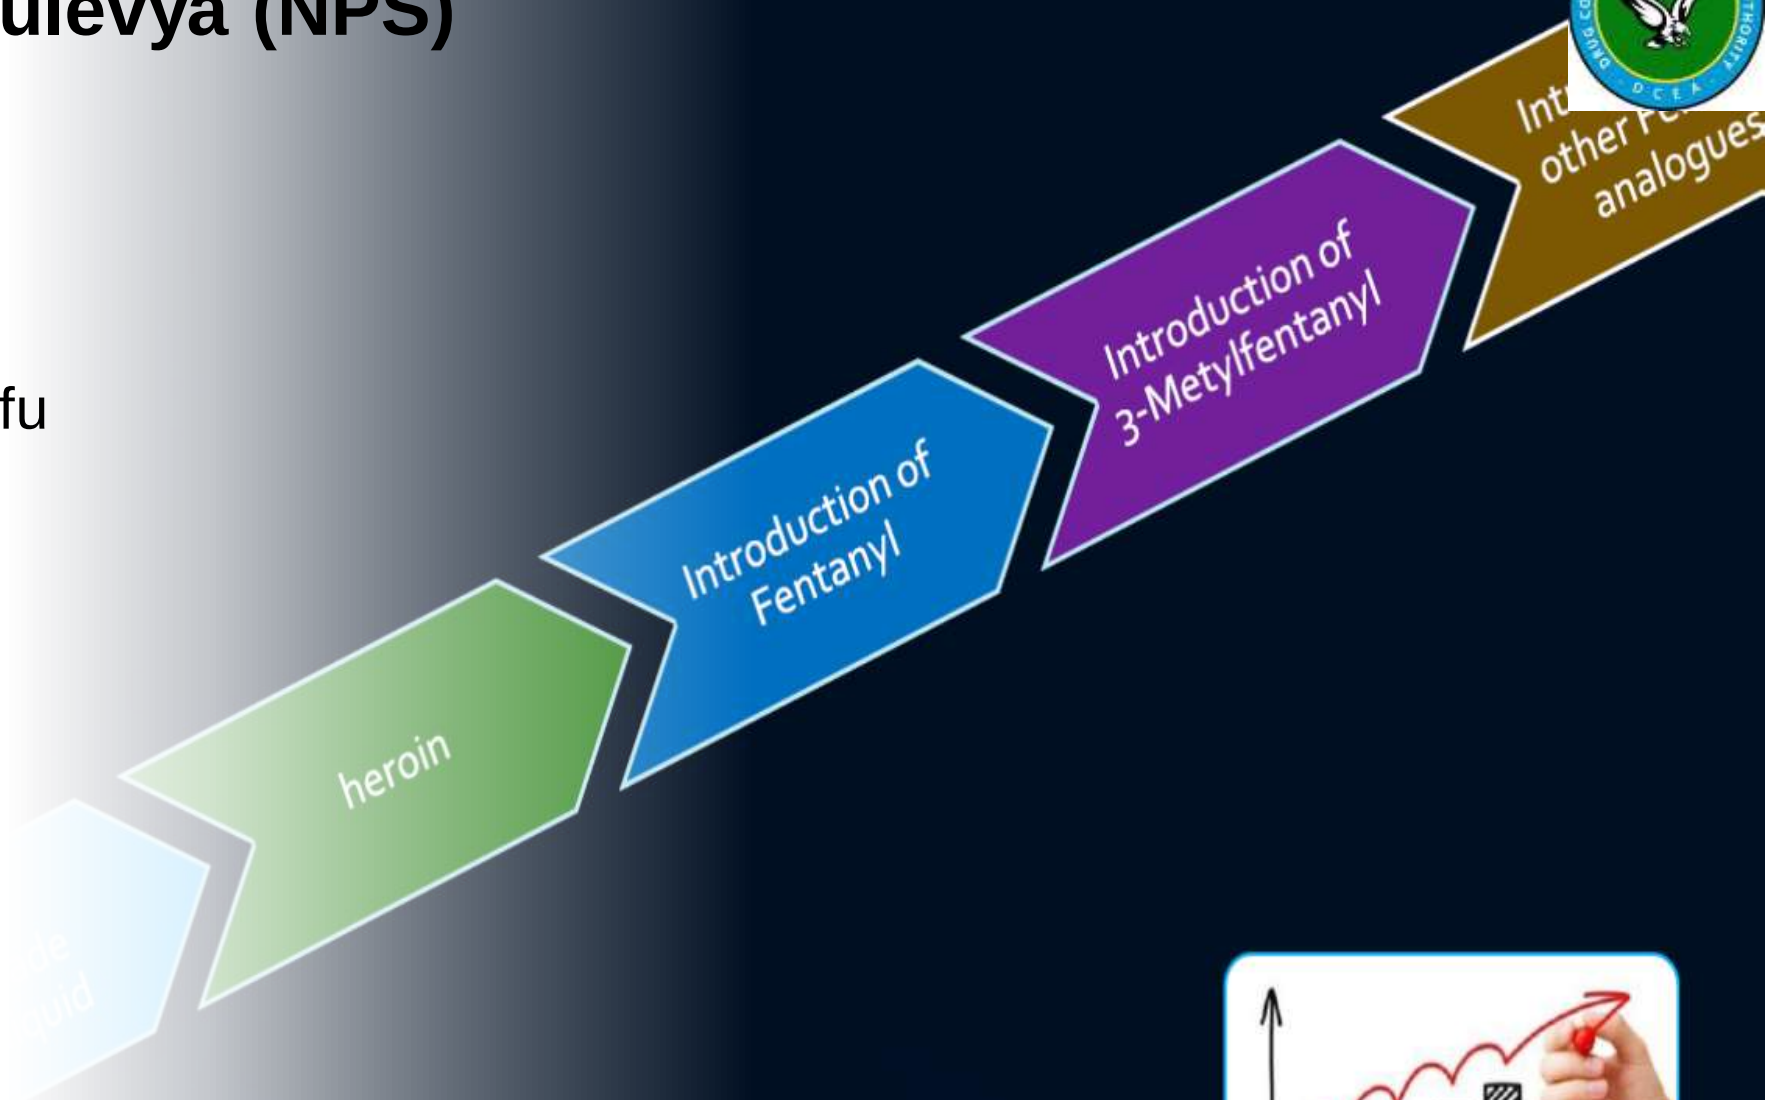

- Caustic soda flakes
- Tartaric Acid (+)
- Acetone
- IPA
- Lead Acetate trihydrate
- Toluene
- Nitric Acid
- HCl

Dawa Mpya za Kulevya (NPS)

- **NPS** ni dawa za kulevya zinazotengenezwa kwa kutumia Kemikali Bashirifu ili kukwepa mkono wa sheria.
- Hadi kufikia tarehe **03/07/2026**, nchi 155 zimebaini takribani **NPS 1,488** na kuripotiwa na UNODC.

Hali ya Ukamataji wa NPS Duniani (IONICS)

Ketamine

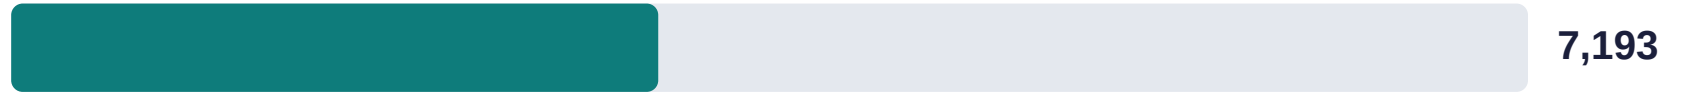

Tapentadol

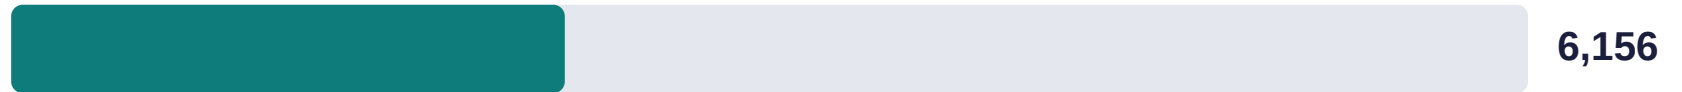

Carisoprodol

Tramadol

Alprazolam

Dawa Mpya za Kulevya (NPS) - Tanzania

- MDPV – 5kg
- Ketamine – 1.92kg
- Tabernathe manii – 15 ml
- Codeine – 440 bottles & 96 tabs
- Flunitrazepam – 1,000 tabs

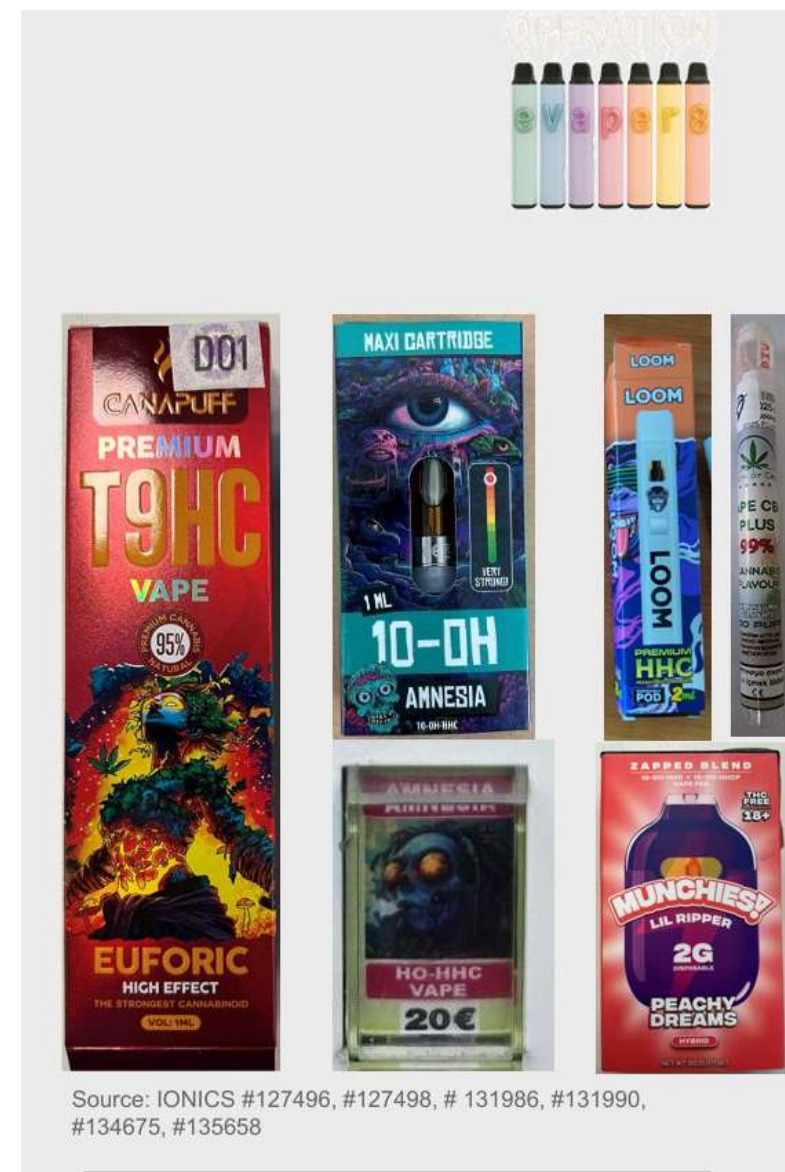

Matumizi ya NPS katika bidhaa mbalimbali

- Kumbainika kuwepo na matumizi ya NPS katika bidhaa mbalimbali zinazopatikana kirahisi
- Kupitia operesheni zinazoratibiwa na bodi ya kimataifa ya kudhibiti Dawa za Kulevya(INCB) ilibainika kuwepo na matumizi ya bhangi ya kutengenezwa (synthetic cannabinoids) katika sigara za kielektroniki katika Nchi mbalimbali duniani.
- Hii inaashiria hatari kubwa iliyopo ya kuweza kusafirisha NPS Duniani na hivyo kuwa na changamoto katika udhibiti.

SEMI-SYNTHETIC CANNABINOIDS

- Structurally similar to THC, but effects not fully studied due to number of analogues
- *Can* be derived from naturally occurring cannabinoids (e.g., CBD)
 - “Hemp derived” marketing
- Often in legal grey area, marketed as “legal highs”
- In eVaper8: of 16 synthetic, 12 were semi-synthetic
 - 10-OH-HHC, HHC, THCV, Delta8-THC, 10-OH-THC, HHC-P, HHC-O, 10-OH-HHCP, H4-CBD, THC-O, THCP, THCP-O
- Packaging often with substance names and flashy artwork
- Open surface web shops, vending machines

ASE STUDY: CYPRUS

- 3 raids in CBD retail shops
- 28 distinct product varieties containing targeted synthetic cannabinoids
- Forensic testing: multiple cannabinoid mixes in products
 - Mostly semi-synthetic, 5 items with fully synthetic cannabinoid MDMB-4en-PINACA (“South of Crete”)
 - Mixes of intoxicating and non-intoxicating cannabinoids
- Testing confirmed mislabelling:
 - “CBG plus” – no CBG, but semi-synthetic cannabinoids
 - “Feel Well” – claims 0% THC, but had THC and Delta8-THC

HSA Investigates Public Vaping Incidents; Etomidate-laced E-vaporisers Seized

The Health Sciences Authority (HSA) is investigating two cases of a person using one of the offenders and a seller was tested to contain a medicinal ingredient that should only be used under medical supervision.

On 14 April, the HSA was alerted to a case involving a girl who while vaping in public outside the State Courts. She was unlikely to be obtaining it from her surroundings, a sign of possible drug intoxication. The 13-year-old girl and her mother were arrested. HSA has seized one e-vaporiser to contain etomidate.

HSA also swiftly identified and caught the person who sold the one e-vaporiser and three pods seized from the seller were also four etomidate. The 13-year-old girl, the 25-year-old male seller and his 21-year-old sister were arrested.

HSA Charges Man in Largest Haul of Almost 2,000 Etomidate E-vaporiser Pods Since 1 September 2025

The Health Sciences Authority (HSA) has charged a 30-year-old man, Muhammad Khairu Bin Abdullah, in court on 22 January 2026 for the alleged trafficking of almost 2,000 etomidate e-vaporiser pods. This is the largest haul of etomidate e-vaporiser pods seized in an operation to date by HSA since etomidate was classified as a Class C controlled drug under the Misuse of Drugs Act on 1 September 2025.

used was detained by the Immigration & Singapore through Woodlands Checkpoint. A month-old niece, ICA officers discovered in the car boot. HSA was alerted and the same day which yielded three regular pods seized at the checkpoint going.
